

LEARN WITH TPP

25 MAY 2023, 6 - 8 P M S G T

Obsessive-compulsive disorder is regarded in mainstream psychology as a simple anxiety disorder. In psychoanalytic psychotherapy, it is regarded both as a simple disorder and a complex disorder often associated with significant pathology and even, in complicated cases, with schizophrenogenic phenomena. This workshop seeks to explore the more complicated treatment regimes for the condition in psychodynamic psychotherapy to go beyond the ridiculously simple Cognitive Behavioural Therapy, the underpowered Response Prevention Therapy, and other more linear therapy technologies. The workshop will include a lot of case material including obsessions related to violence; sexuality/sensuality; relationships; harm to others; harm to infants; germs/cleanliness/contamination. The workshop will unpack a tight and complex way of formulating OCD; the targets of intervention with OCD; and the basics of a patient therapeutic approach to this very challenging condition.
